

Thank you for purchasing a NavLink Blue Vakaros Edition.

Here is how to quickly set up your Vakaros Atlas 2 and NavLink Blue out of the box:

1. Connect the NavLink Blue to a spare NMEA 2000 network connector on your boat, then power on the boat's NMEA 2000 network.
2. Open the Vakaros Connect app and set up your account by following the Vakaros user manual.
3. In the Vakaros app, select an existing Boat Profile or create a new one, then tap "Add Device".
4. Select "NMEA 2000 Gateway", then select "NavLink Blue".
5. Wait until the NavLink Blue gateway appears in the Vakaros app.
6. On the Boat Profile page, you should now see the paired device. Tap on it to select which data from your NMEA 2000 network you want to display on your Atlas 2.
7. The data is now being sent to the Atlas 2.

Important: the default data fields on the Atlas 2 may not show data coming from the NMEA 2000 Gateway automatically. You may need to modify the Atlas 2 data field layout and add the required NMEA 2000 data fields manually.

No additional configuration is required. For more detailed instructions, please refer to the full manual.
